Computational Linguistics – Natural Language Processing – Translation/Interpreting

I am a computational linguistics student exploring the structural connections between human language and computer programming, and how computers can create, evaluate, generate, and document language.
Thank you for your consideration.

Skills:

C++ | Python | Bash/Linux | LaTeX and Markdown | Fluent in Spanish

Education:

University of Colorado Boulder

Expected May 2027

M.S. in Computational Linguistics and Natural Language Processing

B.A. in Computational Linguistics

B.A. in Music

Community College of Denver

May 2024

Associate of Arts

Community College of Aurora

June 2016

Certificate in Translation and Interpreting

Experience:

Freelance Spanish Interpreter - 2016 to 2022

- Freelance interpreter working primarily in Education, Housing, and Legal interpretation
- Interpreted English to Spanish and Spanish to English
- Translated documents to Spanish and from Spanish to English

Writing Tutor at Community College of Denver - 2023 to 2024

- Helped students outline, write, and edit writing assignments for college classes

- Supervised and assigned deliveries to other couriers

Sales representative at Polar Bottle - 2010 to 2016

- Oversaw more than 1 million dollars in sales annually
 - Managed customer accounts
 - Pitched products by phone, email, and at trade shows around the US
-

Projects

- developed a command line LLM vs Human language analysis tool in Python
<https://github.com/samAmabile/Lexi>
- built a webscraper to make linguistic corpora in C++
<https://github.com/samAmabile/CorpusCreator>
- designed a basic string compression tool in C++ for processing large linguistic files
<https://github.com/samAmabile/HuffmanCode>
- implemented Byte-Pair Encoding for text tokenization in C++, packaged for Python with pyproject.toml and CMake
<https://github.com/samAmabile/bpEncode>
App demo: <https://tokenz.streamlit.app/>
